

Key points

- AI is the broad field
- ML is subset of AI
- DL is subset of ML
- Gen AI creates new content
- LLM's are used in Gen AI for language understanding and generation.

RELATIONSHIP SUMMARY

Benefits to Society

- * Improve automation and efficiency
- * Enhance decision making
- * Creates new products & services
- * solves complex real-world problems

1. ARTIFICIAL INTELLIGENCE (AI):

Machines performing tasks that normally require human intelligence, such as reasoning, learning, problem solving and decision making.

EXAMPLE:

Self-driving cars

2. Machine Learning (ML):

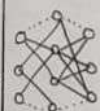

A subset of AI that learns from data and improves performance

EXAMPLES:

Netflix movie recommendation

3. Deep Learning (DL):

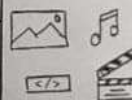

A subset of ML that uses NN with many layers to learn complex patterns from large data.

EXAMPLE

Face-recognition in smart phones

4. Generative AI (Gen AI):

AI models that can create new content such as text, images, videos, music and code.

EXAMPLE

DALL-E generating images from text

5. Large Language Models (LLM):

large deep learning models trained on massive text data to understand and generate human-like text.

EXAMPLE

ChatGPT answering questions, writing emails and more

ChatGPT
